

[e1] Anti-virus software protects the users of a computer from dangers from the internet.

[e2] That's why everyone should have an anti-virus programme on his or her Windows machine.

[e3] Admittedly they do not generally prevent you from catching a virus,

[e4] since they can only react to publicly known threats.

[e5] But once a safeguard has been found against a new virus, everyone gets it in no time through the automatic update.
